Centauri

Multimodality

High Definition Volumetric Imaging computed tomography, digital radiology and fluoroscopy, all in one device.

Diagnostic and intraoperative use

Diagnostics, preoperative, intraoperative and post-operative environments: our technology offers full capabilities.

Easy to move with compact design

Our machines easily move around clinical rooms, passing through a standard door.

Smart technology

The cost of infrastructure and maintenance is minimized: low electrical consumption, remote technical assistance and small footprints are some key factors of our technology.

Hard tissue and soft tissue

Outstanding image quality in hard and soft tissues with a spatial resolution up to 100 μm .

Centauri

Our HDVI technology (High Definition Volumetric Imaging) is the highest level of evolution of **Flat Panel CT** technology, providing great quality imaging in **diagnostic settings** and **intraoperative theaters**. It is the gold standard for orthopedic applications allowing the scanning of limbs of a horse under general anesthesia.
